

S HEAD

TECHNICAL SPECIFICATIONS

Material	Solid bar Stainless Steel
Total Weight	315 grams
Recommended application	General use

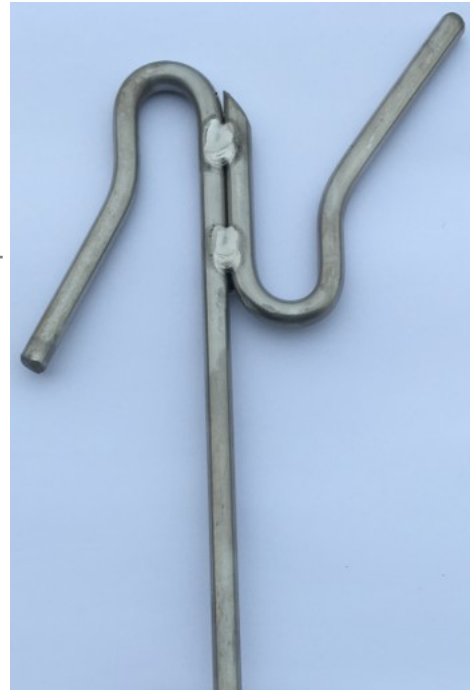

SOLID STAINLESS STEEL BAR

The S head is made of solid stainless steel bar which is cold turned to shape to ensure the strength of the steel is not compromised during the manufacturing process.

MOST FAMILIAR DESIGN

The S head is popular around the world due to its familiar and practical design.

CAN OPERATE DAMAGED TWISTLOCKS

Old semi automatic twistlocks often have broken or bent plastic toggles making it difficult to unlock. The S head fits onto twistlocks missing the plastic toggle.

WIDELY FLARED MOUTH

The S head has the mostly flared mouth of any design allowing easy placement of the S head on to toggles.
