

BUTTERFLY HEAD

TECHNICAL SPECIFICATIONS

Material	Marine Grade Stainless Steel
Total Weight	210 grams
Recommended application	Unlock semi-automatic twist locks with broken toggles

ROBUST DESIGN

The butterfly head is made of solid stainless steel plate so is the best choice if damage often occurs.

EASY TO SEE

As the butterfly head is made of marine grade stainless steel it is reflective and stays shiny for the life of the product. This makes it good for use at night or in poor visibility.

BEST OPTION FOR BROKEN TOGGLES

Old semi automatic twistlocks often have broken or bent plastic toggles making it difficult to unlock. The butterfly head fits perfectly on to the remaining metal toggle.

The innermost diameter of the butterfly head fits snugly around the wire holding the toggle to the twistlock allowing it to be unlocked with little of the metal toggle remaining.
